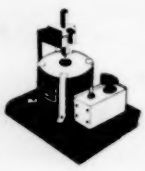
LAB SIZE ELECTROMAGNETIC MINERAL SEPARATOR



For small samples. Operates on 115-volt, 60-cycle circuit. Weighs about 10 pounds. Separates such weakly magnetic minerals as hematite, manganite, garnet, epidote, glauconite, ilmanite, hornblende from non-magnetic and usually from each other. Variable field strength. Price $75.00. Prepaid in U.S.A.

META-MAGNET ASSOCIATES

P.O. BOX 775 SANFORD, FLORIDA

A comprehensive survey of cosmochemistry and the chemistry of the geospheres.

GEOCHEMISTRY

By KALERVO RANKAMA
and TH. G. SAHAMA

This, the first modern account of geochemistry published in English and incorporating much of the extensive European literature, may well prove to be a classic.

The first section of the book treats the general aspects of geochemistry—chemistry of meteorites, abundance of elements and nuclides, geochemical structure and evolution of the Earth. Part II is devoted to a detailed discussion of the manner of occurrence of the elements.

THE ORIGIN OF METAMORPHIC AND METASOMATIC ROCKS

by HANS RAMBERG

A treatise on recrystallization and replacement in the earth's crust

Provides a theoretical background for the interpretation of the complex processes of metamorphism and metasomatism. As a result of the advances made in modern theories of solids and reactions in the solid state, the author has been able to combine much of the old material with a great deal of original work in thermodynamics and crystal chemistry and to construct a sound theory for metamorphic and metasomatic rocks as a new and unexplored geological grouping. A concise, straightforward style and excellent illustrative diagrams make this a stimulating and informative volume of value to experts and students alike. *$10.00*
